Final Project Proposal – Part II

Please add the following part to your final project proposal:

- Non-trivial Functional Dependencies: Analyze each schema of your database and provide its non-trivial dependencies. For each schema, specify which normal form does it holds and give the reasons.

- Search for online sources of real data that can be imported into your database. Please submit a brief report describing your search for real-world data. The report should include the data size, format, and any relevant information about the dataset.
